

Framework Selection Report

Student: Angel Princess Palitayan

Frameworks: React Next.js 14 (App Router) and Vue Nuxt.js 3.

Quantitative comparison: Next.js 14 = 4.43/5 weighted score; Nuxt.js 3 = 4.50/5 weighted score.

Selected framework: Nuxt.js 3. Nuxt.js 3 is selected for its component-oriented architecture, approachable Vue syntax, maintainable conventions, and suitability for a responsive, static/JAMstack-style tourism showcase.

Project priorities: fast loading on 3G/4G, mobile-first responsiveness, maintainability, accessibility following WCAG 2.1 AA principles, and static deployment.

Implementation note: The supplied source-code is a static demonstration of the same atomic component structure. It is organized into atoms, molecules and organisms so the design-system requirements are visible and explainable.
